

## The Lean Production Building Kit System

### item Suspended Conveyor System

The item Suspended Conveyor System is a great option for making it easier to move large, bulky parts around that take up a lot of space in small load carriers and/or cable harnesses, for example, which can become entangled in crates or can't be transported neatly. The main elements of the system are a Convey-

or Rail Profile and Carriage, while special Fastening Brackets can be used to fit the Conveyor Rail Profile either in line with, or underneath, Line D30 cross profiles, so it can be installed at an incline. An Insertion Guide and End Stop ensure materials can be quickly and easily loaded and unloaded.

Simple, rapid assembly

More flexibility for transporting and supplying a whole range of components

Low-wear combination of Carriage and Conveyor Rail Profile

Gentle slope of 3° required

Space-optimised, just-in-sequence material supply

Particularly suitable for large, bulky parts and e.g. cable harnesses
