

Automatic Flat Bracket Set 8 80x40 Al

The fastest profile connection ever – automatic angle brackets and automatic flat brackets from item.

These innovative fasteners are fully preassembled and ready for use. Simply fit them in place and the screws slot into the correct position. Tighten the screws and that's it, the profiles are held in place without the need for additional T-Slot Nuts.

Automatic Flat Bracket Sets and Automatic Angle Bracket Sets virtually install themselves. No threads need to be tapped and profiles don't need to be machined. The fasteners can be inserted at any point along a Line 8 groove and can be reused and repositioned whenever required. All you need to do is turn the screws.

Automatic Angle Bracket Sets make connections inside the frame contour and Automatic Flat Bracket Sets produce readily accessible connections on the outside of the frame. Unlike other profile fasteners, automatic flat brackets are installed on the profiles and can therefore be used to reinforce connections, since the large support width is extremely effective at compensating for torque loads.

Profile connections made with automatic flat and angle bracket sets
