

Automatic Angle Bracket Set 8 40x40 Al

The fastest profile connection ever – automatic angle brackets are fully preassembled and ready for immediate use. Simply put in place – the screws automatically slot into the correct position. Simply tighten – and the automatic T-Slot screws hold the profiles without the need for any additional T-Slot Nuts. No threads need to be tapped and profiles don't need to be machined. The fasteners can be inserted at any point along a Line 8 groove and can be reused and repositioned whenever required. That is ideal when structures are only to be used on a temporary basis, or when work has to be completed fast. Automatic Angle Bracket Sets are fixed inside frames and can even be retrofitted to reinforce right-angled profile connections.
