

Corner-Fastener with Roller 8 40x40

Corner-Fastener with Roller 8 40x40 can be used with Profiles 8 40x40 to build large sliding doors. It creates a stable profile connection for the door frame and features an adjustable roller element. Depending on how the roller element is arranged in the Corner-Fastener, the door element will sit centrally over the guide groove or can be offset in an eccentric arrangement. As a result, the clearance of two sliding doors in parallel Line 8 grooves can be modified.
