

Guide Wedge 8 40x40 30°, Single-Sided

Guide Wedge 8 40x40 30°, Single-Sided gently guides moving elements to keep them heading in the right direction. Thanks to its geometry, this wedge gently guides elements in a single direction, for instance to make sure roller elements on the actuator of a shooter make clean contact with a ramp.

When used as a lead-in piece, the Guide Wedge makes it easier for mobile robots to position themselves under Base Carts and helps with the stacking and directing of products. The Guide Wedge can also correct misalignments in goods flows.
