

GST18-5 Connector

✓ REACH ✓ RoHS

GST18-5 Connector is a 5-pin female connector with neutral and protective earth conductors. The female connector can be used, for example, to control an LED light fitting with a GST18-5 male connector and connect it to the power grid.

The screw fixing with integrated strain relief for the cable ensures installation can be carried out quickly and securely. In the GST18-5 system, the male and female connectors are automatically joined in the correct orientation.
