GST18-5 T-Splitter features one male connector and two female connectors that allow for attaching an additional device to a power and control cable. The 5-pin Splitter with neutral and protective earth conductors can be used to connect several LED light fittings with a GST18-5 male connector to the power grid in a cascading connection. The screw fixing with integrated strain relief for the cable ensures installation can be carried out quickly and securely. In the GST18-5 system, the male and female connectors are automatically joined in the correct orientation.
